                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat appastic anaema, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                           Human, antianaemic; vulnerary; antiinflammatory; immunomodulator;
antiinfertility; cerebroprotective; cytostatic; rheumatic; gene therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAW1832-AAM83302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                   Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ma Y;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

                                                                                                                                                                                                                          02-AUG-2001
The present sequence shows a Helicobacter pylori cytoplasmic protein that may be used in a vaccine to prevent or treat H. pylori content or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.

The genomic sequence of H. pylori [ATCC 55679] was determined from overlapping contigg generated by mechanically shearing the bacterial by. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other Known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and cher cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune cliscase, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular diseases such as mycardial ischaemias; (d) wound parastici infections diseases such as viral, bacterial, fungal and parastici infections.

Constant of infections diseases such as viral, bacterial, fungal and parastici infections.

Constant of infections diseases such as viral, bacterial, fungal and parastici infections.

Content of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip. wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Musculoskeletal system antigen; cancer; metastasis; re-vascularisation; thrombosis; arteriosclerosis; mineral content; cardiovascular condition; wound; injury; burn; angiogenesis; ulcer; post-operative tissue repair; limb regeneration; neuronal growth; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; AIDS-related complex; chondrocyte growth; bone regeneration; periodontal regeneration; tissue transport; bone graft; skin aging; keratinocyte growth; hair loss; melanocyte growth; call proliferation; cell growth; organ transplant; cell differentiation; body height;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                            Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful cord detecting disorders, e.g., cancer or cancer metastases, in animals for the nucleic acid: stimulates re-vascularisation of ischaemic cor humans. The nucleic acid: stimulates re-vascularisation of ischaemic cor tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions such as thrombosis, atimulates anglosenesis conditions, such as, Alzheimer's disease, parkinson's disease, and number of complex; stimulates neuronal growth; can treat and prevent conditions, such as, Alzheimer's disease, Parkinson's disease, and conditions, such as, Alzheimer's chondrocyte growth, thus they can be cused to enhance bone and periodontal regeneration and aid in tissue conditions to bone grafts; prevents skin aging due to sunburn by stimulating keratinocyte growth; prevents hair loss, since FGF family transports or bone grafts; prevents skin aging due to sunburn by stimulating keratinocyte growth; prevents hair loss, since FGF family stimulates growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains organs before transplantation or for supporting cell culture of primary tissues; induces tissue of mesodermal origin to differentiate in early embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of colour, skin, percentage of adipose tissue, pigmentation, size, and shape colour, skin, percentage of adipose tissue, pigmentation, size, and shape colour, skin, percentage of adipose tissue, pigmentation, size, and shape colour, skin, percentage of adipose tissue, pigmentation, clerance for pransitions, menal state or physical state by influencing biorhythms, crontent, libid, protein, carbohydrate, vilementy libid, protein, carbohydrate, vilementy or stress; increases or decreases storage ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Staphylococcus aureus protein; ribozyme; antisense sequence; control; Staphylococcal gene; regulatory element; bacterial gene expression; vaccine; Staphylococcal infection; food poisoning; scaled skin syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           novel human musculoskeletal system antigen.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                        Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

This invention describes a novel protein conjugate (I) comprising at least 1 functional region (FR) at any position in the sequence of a carrier protein (II) to form a capsid three-dimensional structure of the Lawraine synthase (LS) type, such that the outer periphery is covalently linked to many FR. The invention also describes (I) a hetero-oligomeric protein conjugate (Ia) comprising either a mixture of at least 2 (I) and at least 1 (II) that lack FR, with the components optionally covalently linked by chemical treatment; and the components optionally covalently linked by chemical treatment; and the components optionally covalently linked by chemical treatment; and preparation of (I); (4) a DNA (III) that encodes (I); (5) LS from C preparation of (I); (H) a DNA (III) that encodes (I); (5) LS from Bacillus subtilis with Cys 33 and/or Cysl39 replaced by Ser; (6) DNA (IIIa) encoding LS from Aquifex acolius which is codon-optimized for expression in a recombinant Bscherichia coli strain; (7) a chineric corpositions and vaccines containing (I) and (Ia). The products of the invention have cytostatic, antiviral and antibacterial activity and can be used in a vaccine or for gene therapy. (I) are used as pharmaceutical cumors) and in vaccines in contening multivalent vaccines, againnet bacterial or viral infections, to produce diagnostic or therapeutic antibodies, and for preparation of produce diagnostic or therapeutic antibodies, and for preparation of produce diagnostic or therapeutic antibodies, and for preparation of produce diagnostic or therapeutic antibodies, and for preparation of produce diagnostic or therapeutic antibodies, and for preparation of produce diagnostic or therapeutic contentation and seed as biosensors and for preparation of protein libraries (I) may also be used as biosensors and for preparation of protein content of produce diagnostic or therapeutic contents and for preparation of produce diagnostic or therapeutic contents and for preparation or diagnostic contents and for preparation or diag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Lumazine synthase; capsid; cytostatic; antiviral; antibacterial; vaccine; gene therapy; immunotherapy; biosensor; diagnosis.
                                                  Protein conjugate based on lumazine synthase as carrier, useful e.g. for vaccination and immunotherapy, contains many functional molecules attached to outside of the carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      spherical particle (LS comprises 60 subunits that assemble into an icosahedron). The large number of FR may increase sensitivity in immunoassays and the efficiency of immunotherapy agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             69.6%; Score 32; DB 21; Length 156;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a Staphylococcus aureus protein of unknown function. The DNA sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coll. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies with a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

This invention describes a novel isolated 6,7-dimethyl-8-ribityl-lumazine synthase protein (1). The invention also describes (1) isolated DNA encoding (1), and optionally at least one other enzyme of the flavin concoding (1), and optionally at least one other enzyme of the flavin concoding (1), and optionally at least one other enzyme of the flavin concoding (1) is an inhibitors, comprising incubating an aqueous mixture containing (1), 5-amino-6-ribitylamino-2,4(1H,3H)-pyrimidinedione (11) and 3,4-dihydroxy-2-butanone 4-phosphate (III) in the presence and absence of a test compound, and comparing the amounts of 6,7-dimethyl-8-ribityl-lumazine formed; (3) a screening assay for inhibition-resistant containing a mutant of (1), (1) and (III) in the an aqueous mixture containing a mutant of (1), (1) and (III) in the containing a mutant of (1), (1) and (III) in the containing a mutant of (1), (1) and (III) in the containing the amounts of 6,7-dimethyl-8-ribityl-lumazine containing the amounts of 6,7-dimethyl-8-ribityl-lumazine containing the amounts of 6,7-dimethyl-8-ribityl-lumazine (2) (2). (1) is useful for screening for 6,7-dimethyl-8-ribityl-lumazine containing the formed identified by the assay of (2). (1) is useful for screening for 6,7-dimethyl-8-ribityl-lumazine containing containing (2) dimethyl-8-ribityl-lumazine containing contain used to illustrate the containing contain used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                    New isolated 6,7-dimethyl-8-ribityl-lumazine synthase protein, useful for screening for 6,7-dimethyl-8-ribityl-lumazine synthase inhibitors potentially useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO19910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA probes for detecting brown adipose tissue gene - contg. nucleic acid sequence recognising uncoupling protein gene or mRNA
                                                                                          Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immune disorders -

The inventors claim probes for detecting the gene or mRNA coding for synthesis of the uncoupling protein of mammalian brown adipose tissue mitochondria. The probes may be used as research tools for screening drugs for the ability to induce brown adipose tissue (BAT) formation. e.g. for treatment of obesity. The probes are produced by isolating the 175 fraction of the BAT polyA RNA from cold-adapted animals and using it to prepare CDNA upon which the probes are based. (Updated on 25-MAR-2003 to correct PA fileld.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A,Authors: Wallin, E.; Hayes, W.S.; Borodovsky, M.; Karpk, P.D.; Smith, H.O.; Fraser, C. A; Title: The complete genome sequence of the gastric pathogen Helicobacter pylori.
A,Reference number: A64520; MUID:97394467; PMID:9252185

A,Accession: D6467

A,Status: preliminary; nucleic acid sequence not shown; translation not shown and the status of the complete type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Residues: 1-406 <TOM>
